FOR THE OWNER WHO KEEPS IT ALL MOVING

Know what needs to happen next.

Bring customer records, work queues, quotes, invoices, approvals, and handoffs into a shared OverHead workspace. Desktop serves an individual user; Cylinder extends the same daily tools to a department-managed Server and workstation Clients.

Built for small offices and departments that need clear customer follow-through, keyboard-friendly navigation, and a dependable next step.

Search all records, quick-create common work, review the action inbox, and open any workspace with Ctrl+K. Adjust text size and contrast from Shortcuts & comfort.

01 / CUSTOMERS

Keep the context.

Find customer details and the next step without rebuilding the story.

02 / WORK

See the follow-up.

Track tasks, appointments, quotes, and invoices as work moves forward.

03 / CONTROL

Review the decisions.

Use staff roles, approvals, and activity records for sensitive changes.

AN EVERYDAY EXAMPLE

A customer asks for a quote.

Capture

Record the customer and request.

Follow through

Prepare the quote and track the next action.

Review

Keep the invoice and work history available.

PRACTICAL TOOLS FOR DAILY OPERATIONS

Give the office a clearer routine.

Customer records & documents

Keep contact details, notes, and attached documents close to the work. Shared customer sync supports connected workspace accounts; attached documents remain on the device.

Tasks & revenue work

Organize appointments, quotes, invoices, reminders, and follow-ups. Give the next action a place to live.

Roles & review

Assign staff access and review sensitive actions. Activity records help the owner understand what changed.

Backup & support

Create local backups, exports, and support bundles. Keep recovery copies somewhere your team can restore from.

THE LATEST SHARED UX

Keep daily work in one flow.

Find it

Search accessible records and switch workspaces with the command palette.

Plan it

Compare task dependencies and weekly capacity in Work Planner.

Hand it off

Prepare a reviewed shift packet and role checklist.

Bulk status changes show a preview before saving. Updates come from the configured release feed for the installed package. Roles and local data boundaries still apply.

Payment availability: These tools do not authorize a Stripe merchant account or process a card payment. Live checkout and automatic trial activation still require server setup. Contact support about plan activation, cancellation, or billing requests.

YOUR FIRST SESSION

Start small.
Make the next step easier.

Start by choosing the package for your Windows host. Create or sign in to the right workspace, add a customer and next action, then make a recovery backup.

Each Desktop tier includes one user; added seats halve the previous seat price (rounded down) to a $14.99 minimum. Desktop charges cap at Cylinder's $499 per month, and Cylinder is recommended when the uncapped total would pass $499. The first paid month is free at checkout and does not stack with the existing trial. Confirm current annual and trial terms before purchasing.

Edition	For	Added capacity
Desktop	Individual users on regular Windows 10/11	Full core office workflows without department-wide GPO controls.
Cylinder Server	Department host on Windows Server or Windows IoT	Employee Ranks, department scope, device approvals, and central access policy.
Cylinder Client	Managed Windows 10/11 workstations and remote desktop endpoints	Shared employee workflows governed by the department Cylinder workspace.

All three share the core application experience. Cylinder is a separate multi-user deployment with its own installer, data directory, and update feed. Cylinder policy controls OverHead access; it does not configure native Windows GPO. Confirm current price, entitlement, and availability with support.

Ready to put it to work?

Get the Windows app Get setup help

Choose the Desktop or Cylinder package that matches your Windows host and department. Verify package identity and release status on the official site. For support, share the installed version and issue; keep passwords and payment details private.
