OH OVERHEAD

PRE-SEED PITCH DECK · WORKING PROTOTYPE

# One clear place to run the business office.

OverHead helps business owners keep customer details, quotes, follow-ups, invoices, approvals, payment information, and daily office work from getting lost across too many tools.

PRE-SEED PLANNING · PRODUCT AND PILOT VALIDATION

THE PROBLEM

# Small-business office work is still a chain of expensive handoffs.

Customer details, quotes, invoice status, staff decisions, payment tabs, and next steps often live in different places—or only in the owner's head.

01 · LOST CONTEXT

### Every call starts from scratch.

Notes, messages, customer history, and exceptions are fragmented across tools and people.

02 · DROPPED REVENUE WORK

### Follow-up competes with today's fires.

Quotes, payment reminders, and customer responses become harder to see and own.

03 · UNCLEAR CONTROL

### Important actions lack a clear review point.

Owners need staff momentum without losing visibility over sensitive decisions and records.

OH OVERHEAD

THE SOLUTION

# One office hub that fits how each business already works.

OverHead is not one fixed process forced on every company. Each office can set up its own customers, staff, templates, approval rules, reminders, and daily work.

CUSTOMER & REVENUE WORK

### Keep the next move visible.

Customer records, quotes, invoices, payment reminders, and follow-up queues stay connected to the work that needs attention.

CONTROL & HISTORY

### Move faster without losing the record.

Approvals, local records, privacy settings, backups, and activity history help the owner stay in control.

MAKE IT FIT

## Rules

Set up templates, timing, reminders, and approvals for the business.

OWNER-LED

## Control

Give staff a path to act while keeping important decisions visible.

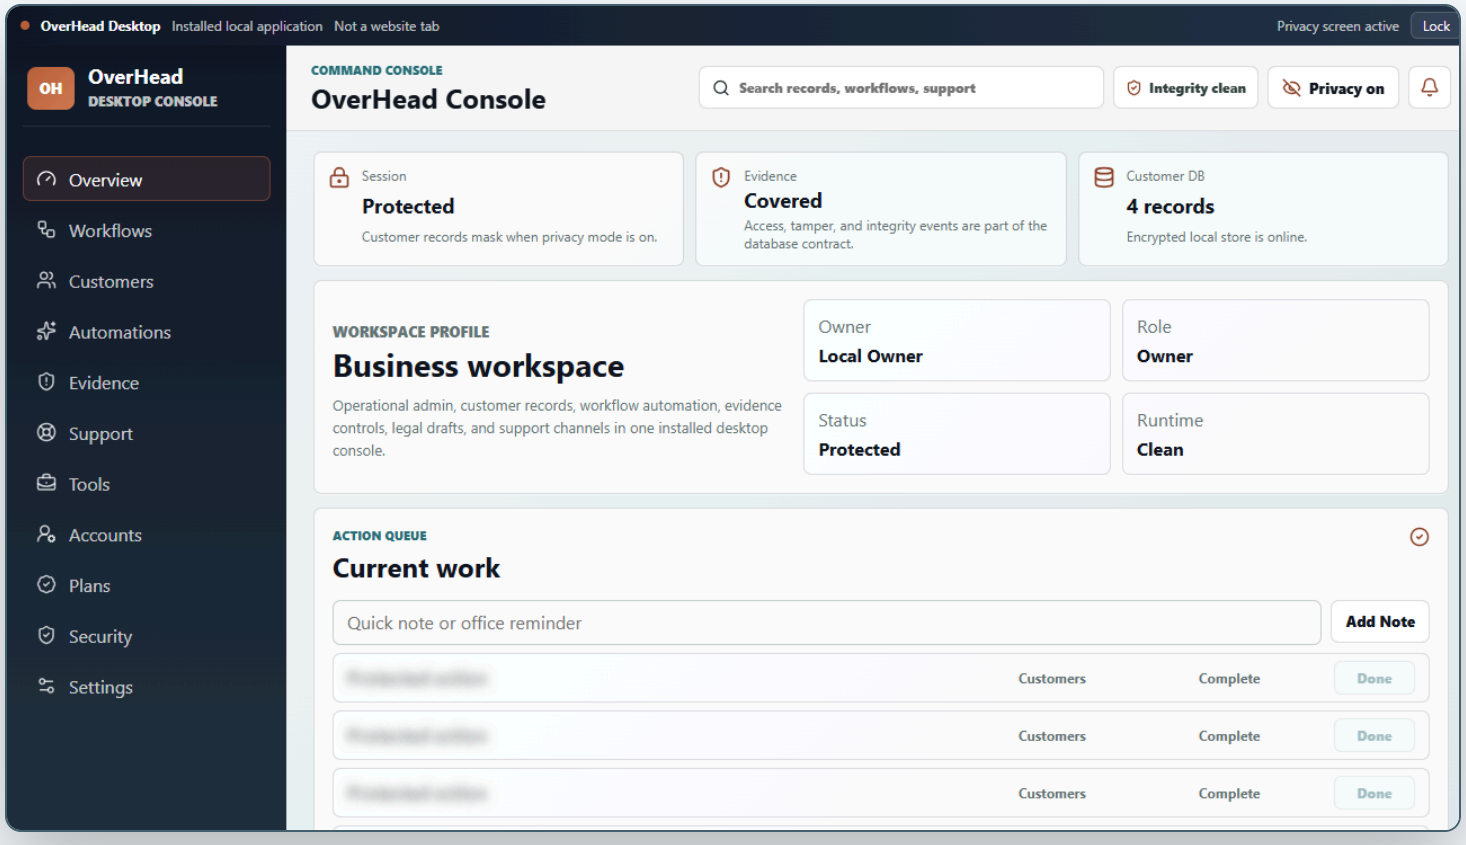

LOCAL-FIRST

## Trust

Designed for resilient day-to-day work, not abstract dashboard theater.

PRODUCT PROOF

# Working desktop prototype—not a concept-only mockup.

## BUILT TODAY

- Windows desktop application and packaged installer
- Local customer records, task lists, office rules, and support tools
- Staff approvals, sign-in protection, activity history, and backup/recovery basics
- Public product website, download flow, legal/support pages, and investor materials

Validation milestones before broader launch: production billing activation, secure shared-account rollout, provider connections, and measured customer pilots.

CUSTOMER

# Built for owner-led businesses with real customer volume and recurring office work.

The core product serves businesses that have outgrown loose notes and disconnected point tools, but do not want the cost or complexity of an enterprise suite.

PRIMARY BUYER

### Owner or operations lead

The person carrying customer history, staff questions, money follow-up, and the burden of “what happened with that?”

FIRST USERS

### Front desk and office team

People scheduling, answering customers, preparing quotes, following up, and keeping the office moving.

FLEXIBLE FIT

### Service businesses first

Start with the day-to-day problems of service offices, then build simple setups around what customers prove they need.

The first marketing message can speak to one industry without limiting who OverHead can serve.

WHY NOW

# Small offices need more control—not more disconnected software.

Customers expect fast answers, quick payment follow-up, and fewer mistakes. AI can help with small tasks, but owners still need one place to review and run the work.

| OFFICE APPROACH | WHAT IT SOLVES | WHAT REMAINS |
| --- | --- | --- |
| Notes, inboxes & spreadsheets | Fast, familiar, low-cost | Important details stay scattered |
| Single-purpose tools | One task at a time | Information gets lost between customer, money, staff, and support work |
| **OverHead** | **One place for daily office work** | **Flexible setup with clear history and owner control** |

OH OVERHEAD

BUSINESS MODEL

# A subscription that expands with office complexity.

The prototype has a proposed three-tier plan. Early pilots will show what customers will pay for, what setup help they need, and which parts of the product they keep using.

**SILVER · PROPOSED**
**$59 / month**

Solo owner: customer records, task queue, basic backup tools, and a reliable daily command view.

**GOLD · PROPOSED**
**$129 / month**

Busy teams: staff profiles, office rules, legal center, and clearer follow-through.

**BLACK · PROPOSED**
**$299 / month**

High-trust offices: deeper records, audit controls, larger teams, and concierge onboarding.

These prices are an early test, not current revenue or live customer billing.

FINDING EARLY CUSTOMERS

# Start with a few hands-on pilot customers, then repeat what works.

01 · RECRUIT
### 5–10 design partners
Find owner-led businesses with clear follow-up, quoting, invoicing, and office-control pain.

02 · SET UP
### Hands-on setup
Set up the first office process with each customer, watch how they use it, and listen closely to feedback.

03 · REPEAT
### Simple setups that work
Turn the most useful patterns into clear onboarding, marketing, and product connections.

HOW WE FIND THEM
## Direct outreach
Reach business owners and office leads with a message that speaks to their everyday problems and a clear pilot offer.

HOW WE LEARN
## Use + conversations
Track whether customers finish setup, come back, use the main features, and see enough value to pay.

OH OVERHEAD

EXECUTION PLAN

# Turn the prototype into a safe, useful product that customers can rely on.

0–3 MONTHS
### Finish the basics
Complete shared sign-in, setup, customer support, safe releases, and the tools needed to learn from pilot use.

3–9 MONTHS
### Run real pilots
Work with early customers, improve setup, test pricing, and build the parts they use again and again.

9–18 MONTHS
### Grow what works
Ship useful connections, turn pilots into customers, and build a steady way to find and keep customers.

SUCCESS IS NOT
## Just downloads
Early success means customers finish setup, keep using it, give useful feedback, and see enough value to pay.

SUCCESS IS
## Useful daily work
Owners can see what needs attention, staff can act within limits, and customer and money work stops falling through the cracks.

TEAM

# Founder-led product build with a practical path to the initial operating team.

FOUNDER · BLACK LION MEDIA STUDIO

### Product, software, and deployment capability already in motion.

Working web, desktop, and Android application portfolio; prototype delivery; Firebase-hosted product operations; and a background in Network Administration.

PRE-SEED TEAM BUILD

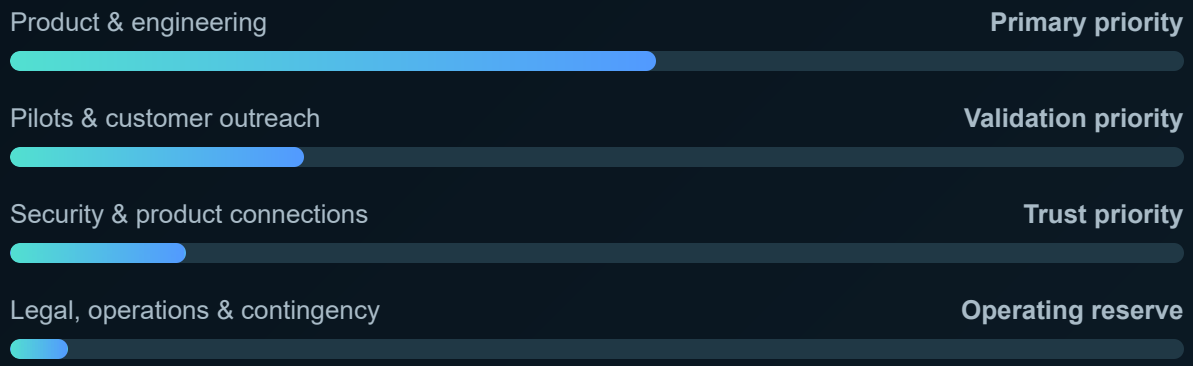

### Add only the roles that make the prototype a reliable business.

First priorities: more product/engineering help, safe SaaS operations, pilot setup and customer support, and careful marketing.

Add founder name, short biography, prior employers/credentials, advisors, and any cofounder details before external investor outreach.

CAPITAL DISCIPLINE

# Capital should fund measurable product and customer-validation milestones.

CAPITAL DISCIPLINE

## Milestone-led

Set the raise amount only after the operating budget, pilot plan, runway, and financing terms have been reviewed with the founder and qualified legal and financial advisers.

This is an allocation framework, not an offer, valuation, forecast, or representation of customer revenue.

OH OVERHEAD

THE ASK

# Help turn a working prototype into a trusted tool for running the business office.

Pre-seed capital will finish the product, fund hands-on pilot customers, test the price, and prove that businesses use OverHead every day.
