FOR THE OWNER WHO KEEPS IT ALL MOVING

Know what needs to happen next.

Bring customer details, daily work, quotes, invoices, and approvals into one Windows workspace.

Built for small offices where the same people answer the phone, follow up with customers, and keep the business running.

01 / CUSTOMERS

Keep the context.

Find customer details and the next step without rebuilding the story.

02 / WORK

See the follow-up.

Track tasks, appointments, quotes, and invoices as work moves forward.

03 / CONTROL

Review the decisions.

Use staff roles, approvals, and activity records for sensitive changes.

AN EVERYDAY EXAMPLE

A customer asks for a quote.

Capture

Record the customer and request.

Follow through

Prepare the quote and track the next action.

Review

Keep the invoice and work history available.

Download OverHead for Windows

PRACTICAL TOOLS FOR DAILY OPERATIONS

Give the office a clearer routine.

Customer records & documents

Keep contact details, notes, and attached documents close to the work. Shared customer sync supports connected workspace accounts; attached documents remain on the device.

Tasks & revenue work

Organize appointments, quotes, invoices, reminders, and follow-ups. Give the next action a place to live.

Roles & review

Assign staff access and review sensitive actions. Activity records help the owner understand what changed.

Backup & support

Create local backups, exports, and support bundles. Keep recovery copies somewhere your team can restore from.

NEW IN DESKTOP 0.3.12

A clearer view of shared billing.

Check setup

Validate test account details and reject secret keys.

Sync the plan

Refresh the same shared plan and license records used by the website.

See the result

Check sync status, errors, and the last successful refresh.

Shared billing refreshes every five minutes during a signed-in standard staff session. You can also refresh from Payments. It requires an internet connection and a shared OverHead account.

Payment availability: These tools do not authorize a Stripe merchant account or process a card payment. Live checkout and automatic trial activation still require server setup. Contact support about plan activation, cancellation, or billing requests.

YOUR FIRST SESSION

Start small.
Make the next step easier.

01 **Install and create your workspace.**

Download the Windows app, create your account, and complete email verification when requested.

02 **Add one real customer and one open task.**

Choose a follow-up, appointment, or quote you already need to handle.

03 **Set access and review the handoff.**

Give each person the access they need. Review the work before expanding to more records.

04 **Make a backup and check the result.**

Confirm that you can find the customer, understand the next action, and recover your records.

Plan	Where to begin
Silver	Core customer records, task queues, and backup tools.
Gold	More staff capacity and workflow automation.
Black	Higher record capacity, deeper controls, and setup support.

Review current pricing and availability with support before choosing a plan. Features depend on your assigned plan and configuration. Cylinder is a separate product for Windows Server and Windows IoT.

Ready to put it to work?

Get the Windows app Get setup help

The current Windows installer is unsigned and may show a Windows warning. Download from the official site. For support, share the app version and issue; keep passwords and payment details private.
