OVERHEAD DESKTOP · 0.3.12 · SEPTEMBER 2026

Your guide to getting work done.

Start here if you are new to OverHead. Follow the steps for your first customer, then return to the section you need while you work.

1. Open your workspace
Create or sign into your staff account.

2. Add one customer
Use Customers → Add customer.

3. Record one next step
Use Team Dashboard → Add Note.

How to read this guide: bold text names a screen, field, or button. Each chapter starts with where to find it. Real screenshots use fictional sample records; they illustrate navigation, not a verified live subscription.

Contents

1. Install, sign in, and start your workspace
2. Find your way around
3. Add a customer and keep their documents together
4. Use the dashboard for your daily work
5. Create appointments, quotes, and invoices
6. Use workflows, reminders, and automations
7. Manage staff access and approvals
8. Understand the trial, plan access, and Payments
9. Bring in existing records
10. Know where your records and PDFs go
11. Back up, export, and restore safely
12. Privacy, appearance, updates, and daily controls
13. Fix common problems and get help
14. A simple routine and quick reference

> This guide covers the standard Windows desktop app. Your role, plan, and installed version can change which controls are available. Cylinder and the customer support portal are separate experiences.

CHAPTER 1 / 14

Install, sign in, and start your workspace

Where: Windows desktop · Sign-in screen

Choose the standard Windows app

1. Use the official Windows installer. Open the downloaded EXE and follow its installation prompts.
2. If you choose the portable ZIP instead, right-click it in File Explorer, select **Extract All**, and keep the extracted files together. Open **OverHead.exe** inside that folder. Do not run the app from inside the ZIP.
3. Open OverHead from its installed shortcut or extracted folder. Cylinder is a separate package for Windows Server/Windows IoT; it is not the standard desktop download.

Create or open an office workspace

1. For a new office, choose **Create Workspace**. Enter the owner name, business name, email, and a password of at least 12 characters. Read and accept the terms, then select **Create Workspace**.
2. Complete email verification when requested. If the app directs you to your inbox, use the newest verification message and return to OverHead.
3. For an existing staff account, choose **OverHead Team**, enter the account email and password, and select **Open Team Workspace**. Use the same identity on the website and desktop.

> **You are ready when:** the internal workspace opens with **Team Dashboard** and your business name. A screen showing only customer support is the customer portal, not the staff workspace.

About the free trial

The trial offer is one 30-day Gold trial per workspace, with no card or charge. After setup, check **Plans** and **Licenses** for your assigned access. If Gold access or trial status is missing, use the checks in Plans and Payments; do not start a paid checkout just to troubleshoot a free trial.

> The current installer is unsigned and may show a Windows warning. If you are unsure about a prompt, keep its wording and contact support. Do not disable Windows protection to install the app.

CHAPTER 2 / 14

Find your way around

Where: Left navigation · Top search · Operations drawer

Choose a section in the left navigation. Scroll within the main workspace to see controls below the first screen. Available actions depend on your role and plan.

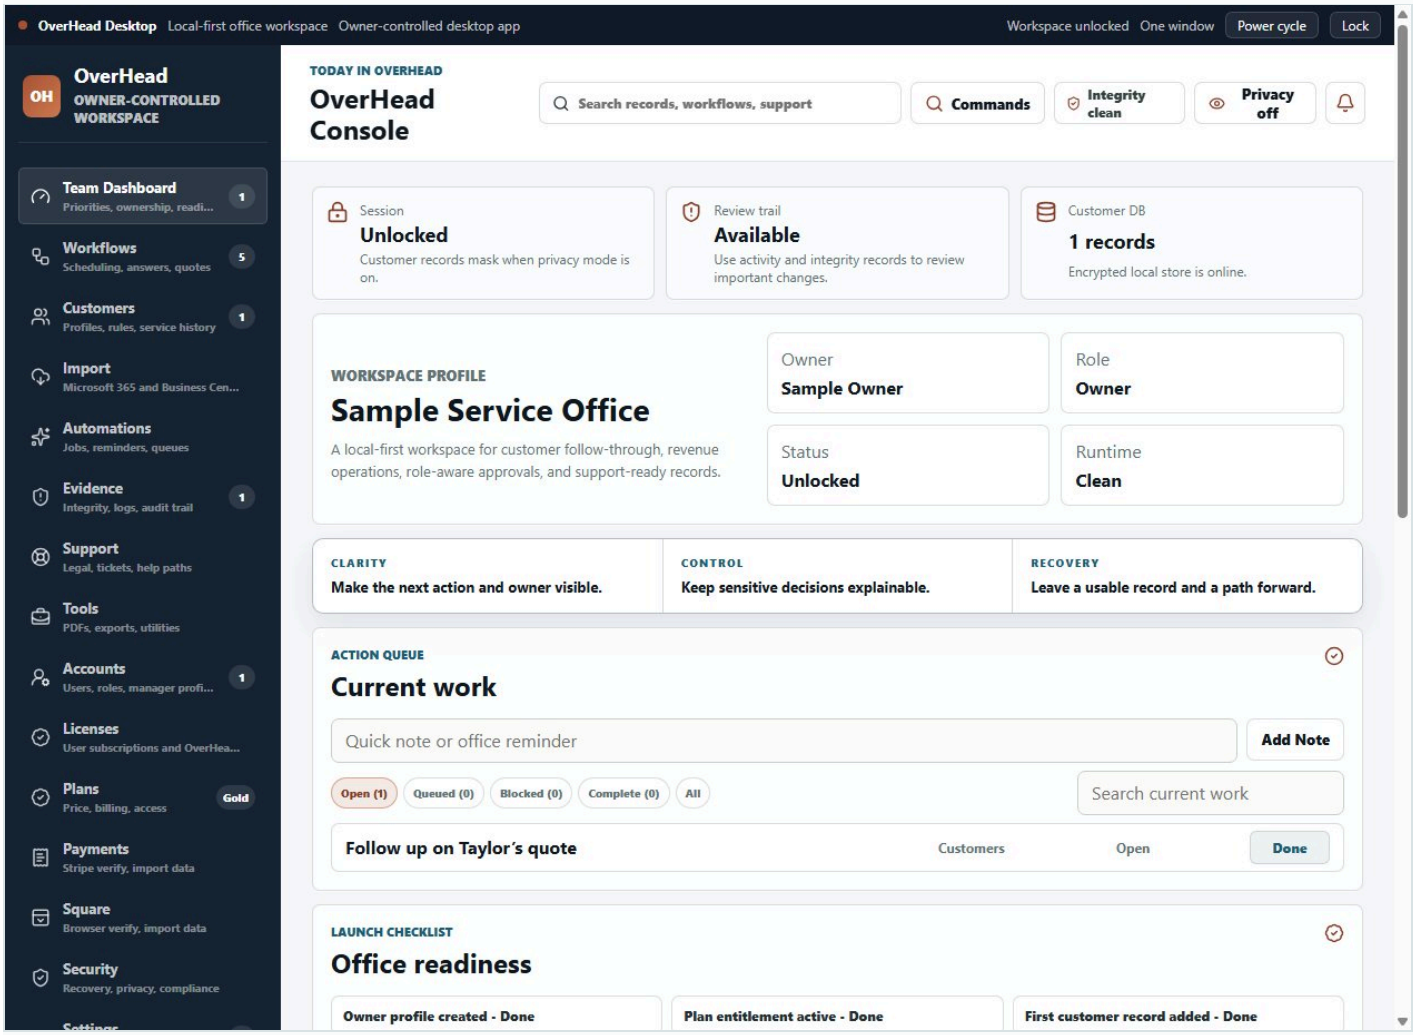

Open this section	To do this
Team Dashboard	Review current work; add notes; create and update appointments, quotes, and invoices.
Customers	Add, find, and select customer records; attach documents.
Workflows	Choose a repeatable work template and create its next action.
Automations	Review queued jobs, run due work, retry failed jobs, and apply customer playbooks.
Tools	Create fillable PDF packets and queue dated reminders.
Accounts	Manage staff profiles and management approvals.
Licenses	Check user license, subscription, and access status.
Plans / Payments	Review plan access / refresh shared billing and manage Stripe test references.
Import / Square	Preview Microsoft records / work with Square setup and reference summaries.
Evidence / Security	Review activity and integrity / privacy and recovery information.
Support	Create a ticket, check the shared support queue, and review policy documents.
Settings	Change appearance, sync customers, back up, restore, and check for updates.

Useful controls at the top

Search records, workflows, support opens the command palette. Search for an action such as **Create Backup** or **Open Customer Records**, then select the result. Use **Privacy on/off** to mask or reveal sensitive records; use **Lock** when leaving the desk.

> A label such as “Protected record” usually means privacy mode is masking the screen. A “higher plan” or permission error is different: ask the workspace owner to check your access.

Your desktop at a glance

Real OverHead 0.3.12 screen with fictional sample records.

1. Left navigation: choose Team Dashboard, Customers, or another section.
2. Top bar: use search and Commands to find actions; Privacy masks sensitive details.
3. Current work: add a note, filter the list, and mark completed work Done.

CHAPTER 3 / 14

Add a customer and keep their documents together

Where: Customers → Add customer / Customer documents

Add your first record

1. Open **Customers** and scroll to **Add customer**.
2. Enter **Business name**, **Owner name**, **Email**, **Industry**, and **Service area**. Choose **Preferred contact**. Correct any required-field or email error shown by the form.
3. Select **Add Customer**. Wait for the confirmation before submitting again.
4. Use **Find a customer** to find the saved record, then select it in the customer list. Check the **Selected customer** name before working on it.

> **Check your result:** the record appears in the list and the selected details match what you entered. Customer creation can also queue a workflow setup task.

Attach and reopen a document

1. Select the intended customer. In **Customer documents**, add an optional **Document label**.
2. Select **Attach Document** and choose the file. Use a file smaller than 25 MB.
3. Check that the label appears under that customer. Select the document label to open it in its associated Windows program.

Invite a customer to their support portal

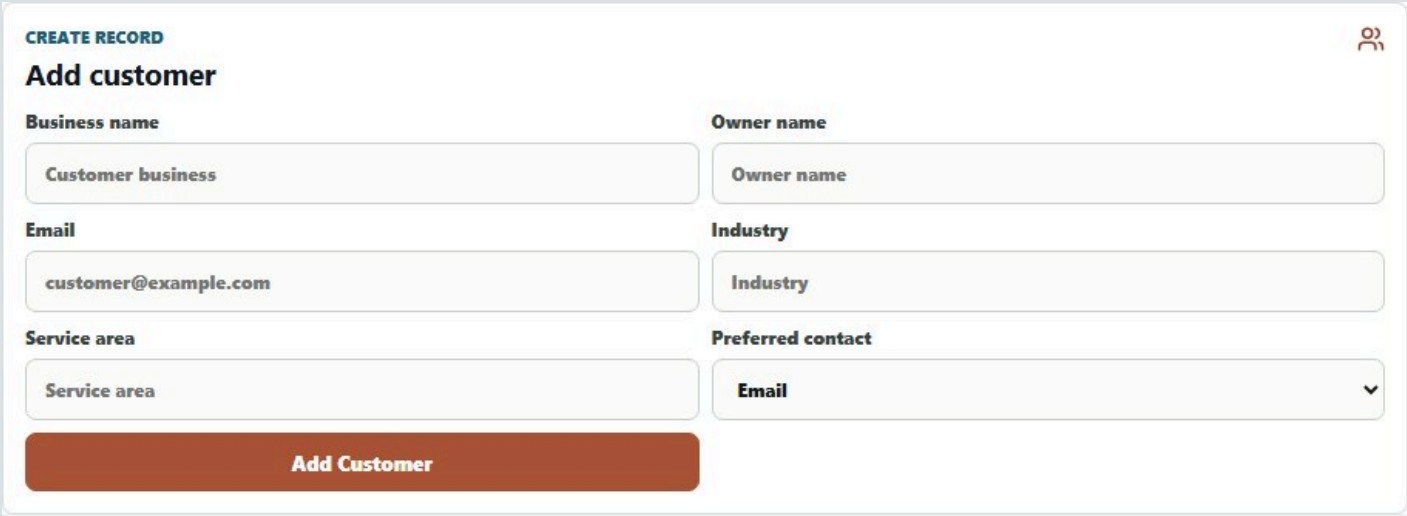

The workspace owner can select a customer and choose **Create Customer Access Invitation**. Follow the invitation instructions shown by the app. The customer uses the customer-account flow; this does not give them staff access to the office.

> Attached files remain on this device. Customer synchronization does not transfer document files to another computer. Keep the original files or a separate document backup.

If you cannot find the record

Clear the search, confirm you are in the correct workspace, and check privacy mode. For shared records, open **Settings** → **Customer synchronization** → **Sync Now**. Read the result before creating another copy.

The Add customer form

The form is below the customer list. Scroll down in Customers to find it.

1. Fill in the customer’s business and contact information.
2. Choose the preferred contact method.
3. Select Add Customer and check for confirmation.

Use the dashboard for your daily work

Where: Team Dashboard → Current work

Add a follow-up or office note

1. Open **Team Dashboard** and find **Current work**.
2. In **Quick note or office reminder**, write one specific action: “Call Taylor about the pending quote.”
3. Select **Add Note**. Check for the saved confirmation and look for the action in the queue.

Find and finish work

1. Choose **Open**, **Queued**, **Blocked**, **Complete**, or **All**. Use **Search current work** to narrow the list.
2. Review the action, area, and status. If the text is protected, reveal it only when the screen is private.
3. After actually completing the action, select **Done**. Open the **Complete** filter to confirm its status.

> A task marked Complete is an office record of completion. It does not prove an email was delivered, a customer accepted a quote, or a card was charged. Confirm the real-world action separately.

Run a simple Revenue Leak Check

Use these existing screens as a daily review routine:

- **Quotes:** check Draft and Sent quotes under **Update and deliver work**; add a follow-up note for those waiting on a response.
- **Invoices:** check Open and Sent invoices and their due dates.
- **Unassigned records:** select the correct Customer for quotes, invoices, or appointments that need one.
- **Approvals:** review pending requests in **Accounts**.
- **Next action:** leave a clear note or reminder for each item that needs attention.

> **End-of-day check:** tomorrow’s most important follow-up is recorded, completed work is marked, and unresolved items still have a visible next step.

Create appointments, quotes, and invoices

Where: Team Dashboard → Create office work → Update and deliver work

Create the record

1. On **Team Dashboard**, scroll to **Create office work**. Choose **appointment**, **quote**, or **invoice**.
2. Enter a descriptive **Title** and choose the **Customer**. Add the customer in Customers first if it is not listed.
3. For an appointment, enter **Scheduled for**. For a quote or invoice, enter **Amount**; an invoice also has a **Due date**. Add useful internal **Notes**.
4. Select **Create appointment**, **Create quote**, or **Create invoice**. Check the confirmation and the saved record list.

Update status or customer assignment

Scroll to **Update and deliver work**, choose the record type, and find the saved row. Change its **Status** or **Customer** selection. The change is saved by the selection; watch for a confirmation or error.

Record	Available statuses
Appointment	Scheduled · Confirmed · Complete · Canceled
Quote	Draft · Sent · Accepted · Declined
Invoice	Open · Sent · Paid · Void

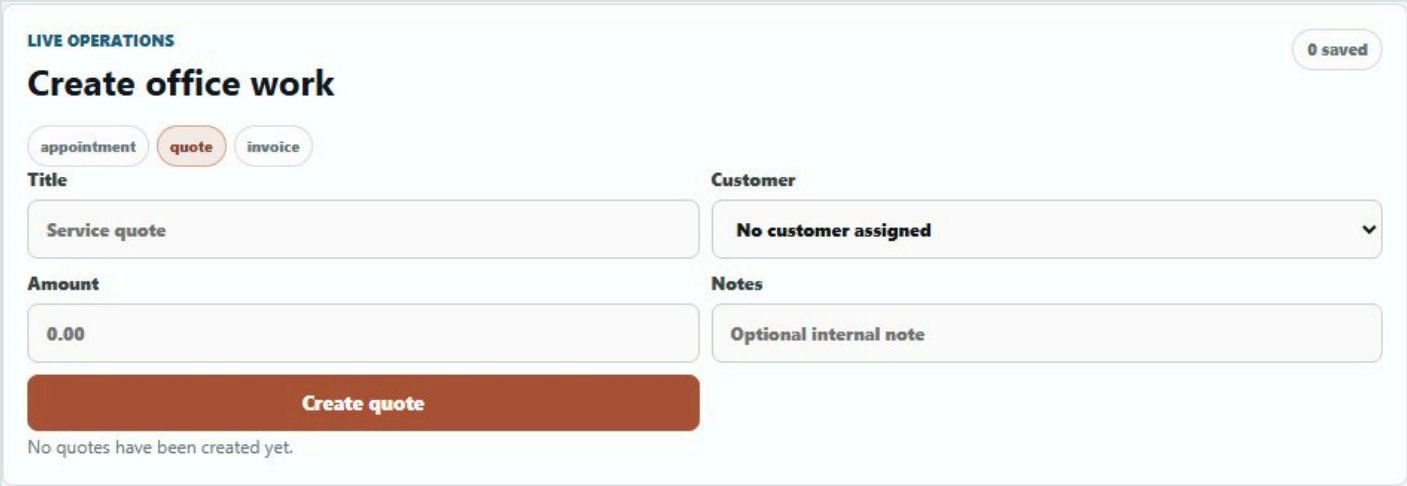

Create a customer-facing PDF

1. In the quote or invoice row, select **Create PDF**.
2. Note the generated file path in the confirmation. Open that location in File Explorer and review the PDF.
3. Confirm the customer, amount, dates, and wording before sharing it through your normal email or delivery process.

> Creating a PDF does not send it. Selecting Sent or Paid records a status; it does not send a message or collect a payment. Mark Paid only after confirming payment through your actual payment records.

> **Check your result:** the record is assigned to the correct customer and the generated PDF agrees with the saved information.

Create a quote on Team Dashboard

This is the saved-record form, separate from the Workflows template screen.

1. Choose quote at the top of Create office work.
2. Choose the Customer and enter Title, Amount, and Notes.
3. Select Create quote. Use Update and deliver work below to change status or generate a PDF.

Use workflows, reminders, and automations

Where: Workflows · Tools → Reminder launcher · Automations

Start a workflow

1. Open **Workflows**. Select **Scheduling**, **Customer Answers**, **Quotes**, **Invoices**, or **Follow-up**.
2. Read the template guidance, then select **Create work**.
3. Open **Automations** to inspect the queued workflow job. Creating workflow work is different from creating an actual quote or invoice; use Team Dashboard for those records.

Queue a dated reminder

1. Open **Tools** → **Reminder launcher**. Enter the action in **Reminder**.
2. Choose a date and time under **Run at**. Leave it blank, or choose **Run today**, to make it due now.
3. Select **Queue Reminder**, then check the job under Automations.

Review and process jobs

In **Automations**, filter by **Queued**, **Complete**, **Dead Letter**, or **All**. Use **Search automations** to find a job. **Run Due** processes jobs whose time has arrived. **Queue Digest** adds an owner-summary job.

“Dead Letter” means a job needs attention after unsuccessful processing. Read its error, correct the cause, and then select **Retry Job**. Repeated retries without fixing the cause are unlikely to help.

Set a customer playbook

Under **Customer operating playbook**, choose a Customer and select **Intake Control**, **Quote Approval**, or **Payment Follow-up**. Select **Apply Playbook**, then check the customer’s displayed Operating playbook. **Build First-Day Plan** is another starting point for setup guidance.

> Desktop jobs need the app running and an active session. External delivery also depends on its configured provider. A queued or completed internal job is not a delivery receipt.

Manage staff access and approvals

Where: Accounts · Licenses

Use an owner account for staff administration. Other roles may see fewer controls or receive a permission message.

Create a staff profile

1. Open **Accounts** → **Invite staff with a defined role**.
2. Enter **Name**, **Email**, and a **Temporary password** of at least 12 characters. Choose Front Desk, Bookkeeper, or Support.
3. Select **Create Staff Account**. Follow the result shown by the app and share access instructions privately.
4. Confirm the person can open the intended workspace. Do not assume that creating a local staff profile also completed a shared website invitation.

Change a profile

1. Select the person’s profile in Accounts. Check the email before changing anything.
2. Review Name, Business, Role, and Status. Use **Suspended** to restrict a profile that should not be active.
3. Select **Save Account** and confirm the saved result. For shared accounts, verify the result on the website too.

Request and review approval

1. Find **Management approvals**. Choose the action type, such as Quote send, Data export, or Staff access.
2. Enter a clear **Title** and **Details**, then select **Request Approval**.
3. The authorized reviewer reads the request and selects **Approve** or **Reject**. Check the resulting status.

> An approval records a decision. Confirm whether the underlying action still needs to be performed; do not assume approving a quote request automatically emails the quote.

Check licenses

Open **Licenses** to inspect subscription, license number, and access status. Website role names can differ from desktop labels: a workspace administrator may appear as Owner in the desktop. Customer portal access is separate from staff access.

> **Check your result:** the right person can open the right workspace and has only the role needed for their work.

CHAPTER 8 / 14

Understand the trial, plan access, and Payments

Where: Plans · Licenses · Payments

Check your assigned plan

1. Open **Plans**. Read the **Active** plan and the Open/Locked feature labels. Selecting a plan card alone does not prove your access changed.
2. Open **Licenses** to check your profile's status.
3. If you use a shared account, open **Payments** and select **Sync Shared Plan and License**. Read Shared billing status and Last successful sync.

Your 30-day trial

The offer is a single, no-card 30-day Gold trial per workspace. Verify the assigned access shown in the app. If your account does not show the expected trial, contact support with the workspace email, installed version, and exact status. Do not enter a card or choose a paid subscription merely to make trial access appear.

What the Stripe controls do

- **Sync Shared Plan and License:** reads the shared plan/license records used by the website. Signed-in standard staff sessions also refresh every five minutes.
- **Open Stripe Test Dashboard:** opens Stripe in your browser. It does not itself connect a merchant account.
- **Save Test Details:** saves non-secret test references. It is not confirmation of Stripe authorization.
- **Save Test Reference:** stores a manually entered summary. It does not collect money or grant paid access.

> For 0.3.12, live checkout and paid activation require the secure billing service to be configured. The guide does not assume every workspace has that service enabled. If a billing action reports unavailable, use support rather than repeatedly submitting it.

Common sync messages

Shared sign-in required: use your shared account. **Sign-in expired:** sign out and back in. **No shared billing record:** ask support to check the workspace's access. **Needs attention:** read the accompanying error and retry after correcting it.

Never enter a Stripe secret key or webhook secret in the desktop app. For subscription cancellation or refunds, confirm availability with support; a manual reference entry is not a cancellation request.

Bring in existing records

Where: Import · Square

Microsoft contacts and Business Central customers

This is optional. Your Microsoft administrator may need to supply the approved application/client ID and tenant details before you can connect.

1. Open **Import**. Choose Microsoft 365 contacts (Outlook) or Dynamics 365 Business Central customers under **Source**.
2. Enter the approved application and tenant details; Business Central also asks for its environment.
3. Select **Connect With Microsoft**. Sign in on Microsoft's browser page. If asked for a device code, use the one displayed by OverHead.
4. Select the relevant **Preview** button. For Business Central, choose the Company and select **Preview Company Customers**.
5. Check the records you want and select **Import Selected Records**. Review the imported and skipped counts.
6. Open **Customers** and inspect the new entries before relying on them.

> **Check your result:** the selected customer records appear with the expected names and contact details. Previewing alone does not import them.

> The preview reads up to 50 records and can expire. If it expires, preview again. Duplicate records are checked at import time; a zero selection imports nothing. This flow creates local customer records and does not edit the Microsoft source.

Square setup and summaries

Square has its own provider setup and summary-import screen. Treat manually entered customer, catalog, order, or payment counts as reference summaries. Opening a browser page or saving a summary does not establish an automatic live transaction feed.

Keep the first setup simple

You can add customers manually and use the main work screens without completing an optional integration. If connection details are unfamiliar, ask the workspace owner or support before changing them. Enter your Microsoft password only on Microsoft's sign-in page.

Know where your records and PDFs go

Where: Customers · Tools · Settings → Customer synchronization

Information	What to expect
Shared customer records	Can synchronize for a signed-in workspace account. Check the displayed sync result.
Customer documents	Attached files stay on the device. Customer sync does not copy them.
Generated PDFs and exports	Saved locally at the file path shown after creation.
Plans and member licenses	Shared records can be refreshed from Payments.

Synchronize customer records

1. Open **Settings** → **Customer synchronization**.
2. Select **Sync Now**. Read the Status, message, and last-sync time.
3. Open Customers and check the expected record. On another device, sign into the same workspace and sync there too.

When enabled, automatic customer sync runs after shared sign-in/local customer creation and every five minutes. A local account or customer-portal account is not a shared staff sync session. Do not assume every local task or attachment has synchronized merely because customer sync succeeded.

Create a fillable packet

1. Open **Tools** → **Fillable PDF packet**.
2. Choose Customer intake, Quote review, or Support request under **Packet type**.
3. Select **Create Fillable PDF**. Open the resulting path in File Explorer and inspect the document.

> In this build the generic Tools packet uses the first customer record when one is present. Review the customer details carefully. For a PDF tied to a particular saved quote or invoice, use that record's **Create PDF** button on Team Dashboard.

Find an output file

Copy the folder portion of the path in the confirmation into File Explorer's address bar. Settings shows the local store location under Local workspace health. If a PDF will not open, use a PDF reader; if an attached document will not open, check its file association in Windows.

Back up, export, and restore safely

Where: Settings → Local workspace health / Restore workspace

Create a backup

1. Sign in as an authorized owner or bookkeeper. Open **Settings** → **Local workspace health**.
2. Select **Create Backup**. Wait for the saved confirmation and note the backup path.
3. Find the file in File Explorer and keep a protected copy outside the computer when practical.

> A local database backup is not a complete copy of every attachment and generated file. Preserve the document files you need separately. A second copy on the same drive will not protect against failure of that drive.

Export or collect support information

Data Export creates an export for review or transfer. **Support Bundle** collects diagnostic material. Both buttons are in Settings. Read the output path and review the files before sharing them; exports and support bundles may contain business information.

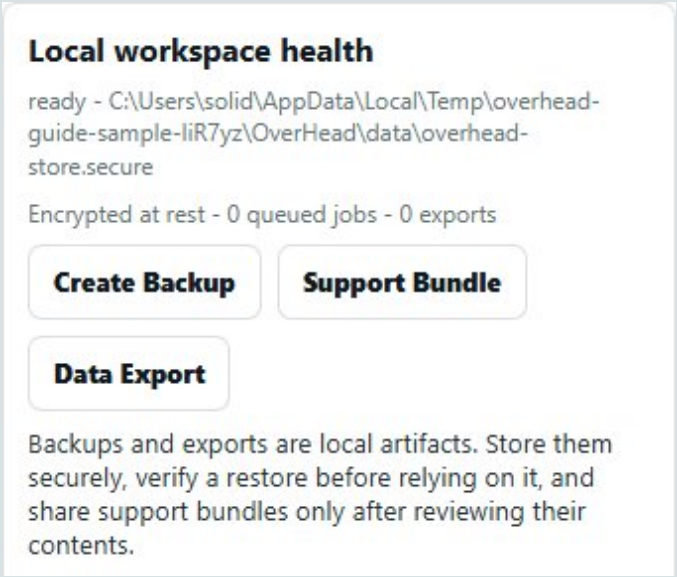

Restore only when you intend to replace local data

1. Make a fresh backup of the current workspace first. Keep original documents and files that need separate protection.
2. Under **Restore workspace**, enter the path to the intended **.secure** or **.json** store file.
3. Select **Validate Restore**. Stop if validation fails. Do not rename a random file to make it appear to be a backup.
4. After confirming the target, type **RESTORE** in the confirmation field and select **Restore Local Workspace**.
5. The restore replaces the local workspace, makes a safety backup, and signs you out. Sign in again and check several expected records.

> **Check your result:** the expected customers and work records are present. Recheck shared synchronization and attached documents separately.

If you do not recognize the backup format, encryption requirements, or target workspace, contact support before restoring. Restore is not an ordinary merge or import operation.

Three different output tools

Settings → Local workspace health. The sample file path will differ on your computer.

1. Create Backup saves the local store for recovery.
2. Support Bundle collects diagnostic material.
3. Data Export creates records for review or transfer.

Privacy, appearance, updates, and daily controls

Where: Top bar · Settings · Evidence · Security

Hide sensitive details when someone can see your screen

Select **Privacy on/off** at the top, or the privacy-mode card in Settings. Privacy mode masks customer and evidence details; it does not delete them. Turn it off only when you are ready to view the information privately. Select **Lock** when leaving the desk.

Choose a comfortable appearance

Open **Settings** and select a theme. Use a theme with readable contrast on your display. Some long pages require scrolling to reach the action you need.

Check for an update

1. Finish your current edits. Open **Settings** → **Updates**.
2. Select **Check**. Read Installed, Available, and the update message.
3. If the update is downloaded, select **Install Update** when ready for the app to restart. Automatic checks can be controlled by **Auto-Check**.
4. After restarting, revisit Updates and confirm the installed version.

> Use the standard desktop update channel for standard OverHead. Cylinder uses a separate package and channel. If the updater reports unavailable, use the official download or contact support with the installed version and message.

Change operational switches deliberately

Settings contains **Operational controls**. Read a switch before changing it, change one setting at a time, and check the affected queue or sync status afterward. If you are unsure what a switch controls, leave it as it is and ask the owner.

Review activity and security information

Evidence contains integrity and activity information; **Security** contains privacy, access, and recovery controls. These screens help explain changes. An integrity indicator is not a guarantee that every account, device, or workflow is secure.

Developer source-folder and code-editor controls are for authorized maintenance. They are not needed for ordinary customer, quote, invoice, or reminder work.

CHAPTER 13 / 14

Fix common problems and get help

Where: Support · Website support center

What you see	Try this first
Only a customer support screen	Return to staff sign-in and choose OverHead Team. Customer Access opens a separate portal.
Protected or hidden records	Check Privacy on/off and reveal details only in a private setting.
An empty work queue	Clear Search current work and choose All. Check that you opened the correct workspace.
A locked feature or role error	Check Plans and Licenses. Ask the owner to review access; a saved plan selection alone does not activate it.
Sign-in or verification fails	Check the email address, use the newest verification email, and use the website's Forgot your password link if needed.
A sync error	Check the connection, read the message, and sign out/back in if shared sign-in expired. Then retry the appropriate sync.
A failed automation	Open Automations → Dead Letter, inspect the error, correct the cause, and then Retry Job.
No file after creating a PDF	Read the output path. Open that folder in File Explorer. Check for an error before pressing Create again.

Create a support ticket

1. Open **Support** → **Create support ticket**.
2. Enter **Subject**, select **Priority**, and describe the problem in **Details**.
3. Select **Create Ticket**. For shared tickets, use **Refresh queue** and check the recorded status.

If the app cannot open, use the website support center or email solidartentertainment@gmail.com.

> **Useful details:** OverHead version, Windows version, section/button used, exact error, and the last step that worked. Share a reviewed screenshot or support bundle if needed. Do not send passwords, recovery codes, card details, or unredacted customer data.

CHAPTER 14 / 14

A simple routine and quick reference

Where: Your daily checklist

At the start of the day

- Open the correct workspace and confirm your profile.
- Review Team Dashboard → Current work using Open and Blocked.
- Review appointments, open quotes, and unpaid invoices.
- Check pending approvals in Accounts and queued jobs in Automations.

After a customer call

- Find or add the customer.
- Create the needed appointment, quote, or invoice on Team Dashboard.
- Add a specific follow-up note or dated reminder.
- Attach a useful document to the correct customer when needed.

Before you close

- Confirm saved changes and mark completed work Done.
- Check customer sync if you use a shared workspace.
- Make a backup after important changes and preserve needed attachments separately.
- Record tomorrow’s first action and lock the workspace.

Word in the app	Plain meaning
Workspace	The office/business context you are signed into.
Queued / Run Due	Waiting to be processed / process jobs whose scheduled time has arrived.
Dead Letter	A job that needs attention after unsuccessful processing.
Playbook	A saved set of workflow rules for a customer.
License / entitlement	The plan and access assigned to an account.
Support bundle	A diagnostic export to review before giving it to support.

> Start with one customer and one task. You do not need to configure every optional connector before using the core office workflow.
